# 1. Executive Overview

OrionStarFX is a multi-asset trading portal built to connect digital assets, tokenized equities, and Pre-IPO market access within a unified financial ecosystem for qualified investors worldwide.

Founded in Jakarta, Indonesia in 2015, OrionStarFX began as a precision-focused trading technology platform. In 2016, operations shifted to Dubai, where the company served as a closed-loop technology provider and internal trading-solutions partner for selected high-net-worth family offices. To preserve extreme privacy and exclusive customization, the platform was not opened to the public during its early development and therefore maintained very low visibility in mass retail markets.

In 2020, OrionStarFX expanded into European markets. Core operations evolved from FX into on-chain assets, with a focus on Pre-IPO and tokenized-asset pilot matching for compliant institutional investors and overseas qualified investors through limited channels.

2026 is a milestone transformation year. After formally completing MSB and SEC-related registration credentials and a structured compliance framework, OrionStarFX unlocked years of institutional trading infrastructure, liquidity networks, and multi-asset matching technology—launching an upgraded unified trading portal and moving from exclusive niche service to an open, compliant platform for global qualified investors.

OrionStarFX is organized around three core product pillars:

- **FX & Multi-Asset Trading:** execution-oriented pathways rooted in FX heritage and modern multi-asset workflows.
- **On-Chain & Tokenized Assets:** controlled matching for digital and tokenized market exposure.
- **Pre-IPO Market Access:** structured pilot pathways connecting eligible investors with selected private-market opportunities.

OrionStarFX maintains MSB and SEC registration credentials within the applicable scope of its operating framework. Compliance architecture centers on identity verification, AML controls, eligibility review, transaction monitoring, and responsible market access.

# 2. Company Background

OrionStarFX was founded in Jakarta in 2015 with a clear objective: build disciplined trading infrastructure capable of supporting sophisticated market access with institutional standards.

In 2016, the company relocated its market focus to Dubai. During this phase, OrionStarFX operated as a closed-loop technology services provider and internal trading-solutions partner for selected high-net-worth family offices. Privacy, customization, and operational precision defined the model. Public retail exposure was intentionally limited.

In 2020, OrionStarFX entered European markets. This expansion marked a strategic evolution from FX-centric operations into on-chain assets and structured pilot matching for Pre-IPO and tokenized products—serving compliant institutional and overseas qualified investors through controlled channels.

The combination of Jakarta engineering roots, Dubai institutional privacy standards, and European multi-asset expansion created the foundation for 2026's open-compliance portal. Today, OrionStarFX continues to develop around one principle: market access should be intelligent, secure, transparent, and globally connected for qualified participants.

### 3. Our Vision

We believe global finance is entering a new era.

For decades, investors accessed different markets through fragmented systems. FX and equities through brokerage stacks; digital assets through separate venues; private-market opportunities reserved for institutions or high-net-worth networks. Cross-border participation was often slow, costly, and opaque.

OrionStarFX was created to simplify this structure.

Our vision is to build a unified trading portal where qualified investors can access digital assets, tokenized equities, and Pre-IPO opportunities through one integrated platform experience.

We believe the next generation of financial infrastructure will have five defining characteristics:

- **Unified Access:** one portal supporting multiple asset classes and product pathways.
- **Global Participation:** qualified users accessing opportunities beyond local market boundaries.
- **Digital Settlement Readiness:** blockchain-enabled representation reducing friction in ownership, transparency, and transferability.
- **Intelligent Trading Tools:** real-time data, analytics, automation, and risk controls supporting better decisions.
- **Compliance-Driven Growth:** sustainable platforms combining innovation with responsible controls and market integrity.

OrionStarFX is built for this future.

## 4. Market Opportunity

The global financial system is undergoing structural transformation.

Digital assets introduced globally transferable market primitives. Tokenization is reshaping how traditional instruments can be represented, accessed, and transferred. Pre-IPO allocation remains one of the most sought-after—and historically restricted—opportunity classes.

At the same time, investors face persistent constraints: fragmented liquidity, inconsistent cross-border access, product silos between traditional and on-chain markets, and compliance complexity that slows execution.

OrionStarFX addresses these challenges by building a unified market-access layer.

Our portal is designed for modern qualified investors who want:

- Faster access to multi-asset opportunities.
- A wider range of product pathways.
- A more transparent trading experience.
- Secure account and transaction infrastructure.
- A platform capable of connecting traditional market logic with digital market rails.

We believe the convergence of multi-asset trading, tokenized instruments, and Pre-IPO access represents one of the most important growth opportunities in global finance.

## 5. Core Product Ecosystem

OrionStarFX is built around three major product categories: FX & multi-asset trading, on-chain / tokenized assets, and Pre-IPO market access. Together, these pillars form the foundation of the unified portal ecosystem.

### 5.1 FX & Multi-Asset Trading

FX heritage remains a core capability. OrionStarFX provides structured trading pathways and account workflows for investors operating across traditional market logic and modern multi-asset execution environments.

Our FX and multi-asset framework includes:

- Major market pairs and execution-oriented workflows.
- Real-time market data.

- Order handling infrastructure.
- Account and security controls.
- Risk monitoring tools.
- Eligibility-aligned access.

The goal is a professional, efficient experience that preserves institutional standards while supporting broader qualified-investor participation through the open portal.

## 5.2 On-Chain & Tokenized Assets

Since 2020, OrionStarFX has expanded from FX into on-chain assets and tokenized instruments.

Tokenized equities and related digital representations create more transferable market structures while preserving investment exposure logic familiar to traditional participants.

Our tokenized and on-chain framework emphasizes:

- **Accessibility:** controlled pathways for eligible investors to reach tokenized market exposure.
- **Efficiency:** digital infrastructure supporting clearer operational workflows.
- **Transparency:** stronger product presentation, process traceability, and audit readiness.
- **Flexibility:** support for evolving product structures and access models.
- **Compliance-by-design:** eligibility requirements, disclosure standards, and market-access controls.

## 5.3 Pre-IPO Market Access

Historically, most investors have had limited access to Pre-IPO opportunities. Private companies often remain private for extended periods, and allocation historically concentrated among institutions, funds, and high-net-worth networks.

OrionStarFX is building structured Pre-IPO pilot matching frameworks designed to connect qualified users with selected private-market opportunities under eligibility, disclosure, and risk-control standards.

Our Pre-IPO model prioritizes:

- Selected private-market opportunity pathways.
- Eligibility-gated investor access.
- Company and asset information review.
- Structured participation processes.
- Risk control protocols.
- Transparent market communication.

The objective is to make qualified Pre-IPO access more orderly, transparent, and operationally efficient—without diluting institutional discipline.

## 6. Unified Trading Infrastructure

OrionStarFX is not designed as a single-product interface. It is built as unified trading infrastructure for multi-asset pathways.

The portal aims to let users access FX heritage pathways, on-chain and tokenized products, and Pre-IPO opportunities through one account experience.

This unified model delivers several advantages:

- **Unified account system:** manage multi-asset pathways through one portal framework.
- **Integrated market data:** consolidate pricing, status, and operational information where product design allows.
- **Cross-asset allocation support:** compare and manage opportunities across traditional and digital market rails.
- **Operational efficiency:** reduce platform fragmentation and improve continuity of access.
- **Scalable product expansion:** add asset classes and modules as markets and regulatory frameworks evolve.

We believe financial infrastructure of the future will be multi-asset by design, digitally enabled, and globally connected. OrionStarFX is building the portal layer to support that transition.

## 7. Technology Architecture

Technology is the backbone of OrionStarFX.

Our platform architecture is designed to support high performance, scalability, security, and sustainable product expansion.

Key technology components include:

- **Matching layer:** engineered for reliable order handling and multi-asset pathway support.
- **Account infrastructure:** authentication, account management, permissions, and secure session controls.
- **Asset and ledger systems:** balances, transaction records, and operational integrity.
- **Market data layer:** real-time and historical information for decision support.

- **Risk monitoring systems:** anomaly detection, account behavior oversight, and operational alerts.
- **Compliance technology:** KYC, AML screening, eligibility checks, and audit trails.
- **Extensible product layer:** capacity to add asset classes, tools, liquidity modules, and market access features.

Technology is treated as critical infrastructure—essential both to user experience and to long-term platform development.

## 8. Security Framework

Security is one of OrionStarFX's non-negotiable design principles.

We apply a multi-layer security model designed to protect user accounts, trading records, asset systems, and platform operations.

Our security framework includes:

- Identity verification.
- Secure account login controls.
- Multi-factor authentication support.
- Transaction monitoring.
- Risk-based account reviews.
- Data protection protocols.
- Secure wallet / account infrastructure where applicable.
- Internal access controls.
- System monitoring and incident response protocols.

OrionStarFX understands that trust is earned through operational discipline. We continuously invest in internal processes, monitoring systems, and user-protection mechanisms to safeguard the trading environment.

Our goal is for users to operate with confidence when accessing multi-asset, tokenized, and Pre-IPO pathways through the portal.

## 9. Compliance Framework

OrionStarFX is built for responsible market participation.

Our compliance framework supports global operations, user protection, and sustainable platform development. The 2026 open-portal decision was made only after MSB and SEC-related registration credentials and structured controls were in place.

These credentials form an important part of our overall compliance architecture and reflect our commitment to responsible market access.

Our compliance program includes:

- KYC identity verification.
- AML controls.
- Transaction monitoring.
- User eligibility review.
- Recordkeeping.
- Risk-based account governance.
- Market access standards.
- Internal compliance audits.
- Regulatory communication readiness.

We believe compliance is the foundation of responsible scale. As product coverage expands across multi-asset, tokenized, and private-market pathways, OrionStarFX will continue strengthening its compliance systems to meet evolving market and regulatory expectations.

## **10. User Experience and Education**

OrionStarFX is designed for experienced market participants and for qualified investors transitioning from traditional markets into broader multi-asset environments.

We recognize that many users are familiar with FX and traditional products, while on-chain assets, tokenized equities, and Pre-IPO pathways may require clearer guidance.

Education is therefore a strategic component of the portal experience. Our education framework may include:

- Market introduction materials.
- Digital asset primers.
- Tokenized product explainers.
- Pre-IPO process briefings.

- Risk-awareness content.
- Platform tutorials.
- Trading workflow guidance.
- Investor compliance FAQs.

Our goal is not only to provide market access, but to help users understand market structure. Informed users make better decisions and contribute to a healthier trading ecosystem.

## **11. Liquidity and Market Access**

Liquidity is essential to a strong trading ecosystem.

OrionStarFX is developing liquidity infrastructure designed to support efficient execution and broader market access across its product pathways.

Our liquidity approach includes:

- Access to multi-asset liquidity sources.
- Trading pair and pathway expansion.
- Market data integration.
- Institutional liquidity collaboration.
- Product-level liquidity planning.
- Cross-market access development.

As the product ecosystem expands, liquidity remains a core focus across FX/multi-asset, on-chain/tokenized, and Pre-IPO pathways. Users should have transparent markets, efficient execution, and reliable platform performance.

## **12. Institutional and Qualified Investor Strategy**

OrionStarFX is designed around institutional DNA while opening responsible access to global qualified investors.

For qualified investors, we provide portal access, education, operational clarity, and diversified multi-asset pathways under eligibility controls.

For institutional participants, we continue building infrastructure that supports liquidity cooperation, structured product workflows, compliance processes, and scalable digital-asset participation.

Our strategy is based on the belief that the future of finance will be shaped by interaction between qualified-investor demand and institutional-grade infrastructure. OrionStarFX is positioned to serve both sides of that transformation.

## 13. Global Expansion Strategy

OrionStarFX began in Jakarta, matured through Dubai's institutional phase, expanded into Europe in 2020, and opened its unified portal under a formal compliance framework in 2026.

Our global strategy is built around responsible market expansion, compliance alignment, and product-market fit.

We focus on regions and channels where qualified investors seek access to multi-asset trading, tokenized markets, and structured Pre-IPO pathways.

Expansion priorities include:

- Strengthening open-portal coverage for global qualified investors.
- Expanding education across markets.
- Building partnerships with technology and liquidity providers.
- Developing tokenized asset access channels.
- Expanding Pre-IPO participation models.
- Improving multilingual and cross-border support.
- Enhancing institutional service capabilities.

As global markets become more connected, OrionStarFX is building the infrastructure to support that connection with institutional discipline.

## 14. Roadmap

OrionStarFX is committed to long-term platform development. Our roadmap focuses on product expansion, technology improvement, security enhancement, and global qualified-investor access.

### Phase 1: Institutional Foundation

- Jakarta founding and core technology formation (2015).
- Dubai closed-loop family-office service model (2016).
- Privacy-first, non-public operating posture.

- Core trading and security systems.
- Early compliance architecture.

## **Phase 2: European & On-Chain Expansion**

- European market entry (2020).
- Evolution from FX into on-chain assets.
- Pre-IPO and tokenized asset pilot matching.
- Limited compliant-channel distribution.
- Market-access process refinement.

## **Phase 3: Open Compliance Transformation**

- MSB and SEC-related registration credentials.
- Formalized compliance framework.
- Unified trading portal launch (2026).
- Opening access to global qualified investors.
- Liquidity and education system expansion.

## **Phase 4: Unified Global Portal Ecosystem**

- Comprehensive multi-asset account experience.
- Broader tokenized equity coverage.
- Improved Pre-IPO participation models.
- Institutional service expansion.
- AI-assisted market tools where appropriate.
- Global partnership network growth.
- Advanced risk-control infrastructure.

OrionStarFX will continue investing in infrastructure, compliance, liquidity, and education to support global market access and future growth.

## **15. Why OrionStarFX**

OrionStarFX is designed for investors who want to participate in the next stage of market development.

We are not a single-product venue. We are building a multi-asset portal that connects FX heritage, on-chain and tokenized pathways, and Pre-IPO access under one compliance-led framework.

Our competitive strengths include:

- A company foundation dating to 2015 in Jakarta.
- Institutional privacy and customization DNA refined in Dubai from 2016.
- European and on-chain expansion since 2020.
- MSB and SEC registration credentials within the operating framework.
- A unified multi-asset product ecosystem.
- Access pathways spanning FX, tokenized assets, and Pre-IPO opportunities.
- Security-centered platform architecture.
- Compliance-oriented operating framework.
- Education-driven user experience.
- Global qualified-investor expansion strategy.
- Scalable technology infrastructure.

We believe the portal is positioned to become a trusted gateway for users seeking exposure to both digital markets and next-generation capital-market pathways.

## 16. Our Commitment

OrionStarFX is committed to building a secure, transparent, and globally connected trading portal.

We are focused on long-term value creation, not short-term market trends.

Our commitment is built around five principles:

- **Security First:** prioritize protection of user accounts, data, and platform operations.
- **Compliance-Oriented Growth:** build with regulatory awareness and responsible market participation at the center of strategy.
- **User-Centered Design:** create products that are practical, clear, and useful for modern qualified investors.
- **Global Market Access:** connect eligible users to opportunities across multi-asset, tokenized, and private-market pathways.
- **Continuous Innovation:** improve technology, products, and education as global finance evolves.

OrionStarFX believes the next era of finance will be open, digital, intelligent, and global. We are building the portal to support that future.

## 17. Conclusion

OrionStarFX was founded to solve one of the most important challenges in modern finance: how to connect qualified investors with global opportunities across traditional and digital markets through one secure and efficient portal.

From Jakarta in 2015, through Dubai's private institutional era, to European on-chain expansion in 2020, and the 2026 open-compliance transformation, we have continued building a multi-asset ecosystem centered on FX heritage, tokenized pathways, and Pre-IPO access.

We believe the future of finance will be defined by convergence. Digital assets will continue to mature. Traditional instruments will increasingly intersect with tokenized infrastructure. Private-market access will become more structured and transparent. Investors will expect one platform capable of supporting multi-asset pathways with institutional controls and global reach.

OrionStarFX is building that portal.

Our objective is to become a trusted access layer for investors, operators, and market participants creating long-term value in the next era of capital markets.

OrionStarFX is more than a trading platform. It is infrastructure for connecting today's markets with tomorrow's financial landscape.
